identifies the check hybrid entered in both early- and full-season tests to assist in comparing the results.

\* indicates seed tested from lots not commercially available at planting. Hybrids in italics exceed the grain moisture limit for this test.

**FIELD NOTES:** *This location had plenty of water during the first half of the growing season. So much so that the plants grew slowly for awhile and then grew better after the post herbicide and side-dressed nitrogen were applied. The plot yielded pretty well for the stress incurred during the season.*
