→ identifies the check hybrid entered in both early- and full-season tests to assist in comparing the results.

* indicates seed tested from lots not commercially available at planting. Hybrids in italics exceed the grain moisture limit for this test.

FIELD NOTES: Better than expected yields for the dry July and August. This was some of the best grain quality that I have seen.

Corn was standing nice for harvest as there was some anthracnose and blight noticeable. With the spring rush this location got sprayed with Roundup but had minimal impact on results.
