**Test Comments:** *Too much of a good thing! This test was put under to much rain for most of May and all of June. Rainfall totals for one storm was over 9 inches. The rainfall leached a lot of nitrogen from the root zone and the soil remained wet preventing a nitrogen application. The only dry weather came in August when corn was trying to finish, further reducing yield potential. Overall test rating is 5 of 10.*

† See last page for footnote information. Dark colored row identifies the check product found in early- and full-season tests. **Bold** yields are significantly above test average. **Italicized** brands exceed the grain moisture limit for this test. **GC** = grower comparison product, **ns** = not significantly different
