**Test Comments:** *The corn plants at this continuous corn site were standing well. Plants looked healthy and strong. This test faced very high stress during and following pollination that some hybrids tolerated well and others did not. Ears varied from small ears with fair to poor kernel set and considerable tip die-back to those with full ears and large seed size. Fuller maturities tended to be more tolerant but not always*

† See last page for footnote information. Dark colored row identifies the check product found in early- and full-season tests. **Bold** yields are significantly above test average. **Italicized** brands exceed the grain moisture limit for this test. **GC** = grower comparison product, **ns** = not significantly different
