Test Comments: Very nice looking tests here in Victor. Corn plants were very tall and quite healthy. Ears were filled with kernels to the tip with good size and length. Most ear tips were pointed down to the ground with strong shanks. Stalks were standing well but getting brittle. Like other sites, grain moistures are stuck in the upper teens. Yields are very good in spite of the late May planting date.

† See last page for footnote information. Dark colored row identifies the check product found in early- and full-season tests. **Bold** yields are significantly above test average. **Italicized** brands exceed the grain moisture limit for this test. **GC** = grower comparison product, **ns** = not significantly different
