Test Comments: *Precipitation during May and June was nearly 12" above average for this area. Despite the cool wet start, plant stands were excellent. Weather turned dry, July through maturity, limiting grain fill. Ear tip die-back was common across hybrids. Crop development was delayed through the growing season and was slow to dry down, however grain quality was excellent. Stalks were strong and stood well.*

† See last page for footnote information. Dark colored row identifies the check product found in early- and full-season tests. **Bold** yields are significantly above test average. **Italicized** brands exceed the grain moisture limit for this test. **GC** = grower comparison product, **ns** = not significantly different
