**Test Comments:** *Planting was delayed a couple weeks behind normal at this site due to cold and wet weather that persisted from late April through mid-May. Stands were good and plant health was excellent through mid-season. July and August turned dry leaving the area nearly 7 inches below normal. Late season rain likely saved this area helping fill grain on shorter ears. Stalk integrity was very good at harvest.*

Dark colored row identifies the check product found in early- and full-season tests. **Bold** yields are significantly above test average. **Italicized** brands exceed the grain moisture limit for this test. **GC** = grower comparison product, **ns** = not significantly different
