n/a non-GMO

Test Comments: After seedling emergence, heavy rains followed and caused water pooling which killed all plants of many plots in these tests. The ground stayed wet for a long period making surviving plants struggle to overcome the stress. At harvest, plants were well matured and stalks brittle but stood well. As shown by the high LSD values, yield variability was unacceptable, too many dead plots. Data rejected.

† See last page for footnote information. Dark colored row identifies the check product found in early- and full-season tests. **Bold** yields are significantly above test average. **Italicized** brands exceed the grain moisture limit for this test. **GC** = grower comparison product, **ns** = not significantly different
