**Test Comments:** *Judson commented that he sees more consistent corn yield across his fields since tiling them. The trials also benefit from the tile as May-June rains were abundant. Plants had excellent kernel sets, deep kernel depths and robust 10-12' plant heights. This site received 1.42" of rain in each July & August, more than most other farms in this test region, contributing to the tremendous top-end yields.*

† See last page for footnote information. Dark colored row identifies the check product found in early- and full-season tests. **Bold** yields are significantly above test average. **Italicized** brands exceed the grain moisture limit for this test. **GC** = grower comparison product, **ns** = not significantly different
