Test Comments: *Although this site had uniform stands, it's early emergence was stunted in some areas. A replication in a low area was discarded as plants were short and yield varied. Everything else appeared to be mostly uniform at harvest. Kernel depth was near 0.5" and kernel set was great with little tip back on ears. Lodging was slight, but some hybrids had cannibalized stalks due to limited late season rains.*

† See last page for footnote information. Dark colored row identifies the check product found in early- and full-season tests. **Bold** yields are significantly above test average. **Italicized** brands exceed the grain moisture limit for this test. **GC** = grower comparison product, **ns** = not significantly different
