**Test Comments:** *This was a nice high yielding location. Plants stood well as a whole. Any lodging observed was stalk lodging. There was evidence of rust, Anthracnose, and some charcoal rot present at harvest. Most ears were extremely girthy with very large kernels. Most full season corn plants had green in the top half. Almost all ears were hanging down. High water capacity and productive soil type.*

Dark colored row identifies the check product found in early- and full-season tests. **Bold** yields are significantly above test average. **Italicized** brands exceed the grain moisture limit for this test. **GC** = grower comparison product, **ns** = not significantly different
