Test Comments: Don commented that these trials were under water 3 times within weeks of planting, receiving 3 - 5" rains that cut stands of a few products. In July, a wind micro-burst vortexed through the trials causing tunnelling/stalk lodging. Stalk integrity varied by hybrid. Some stood very well and others not so well. Yield, kernel set, ear tip fill and kernel depth were all excellent on 10-12 feet tall plants.

† See last page for footnote information. Dark colored row identifies the check product found in early- and full-season tests. **Bold** yields are significantly above test average. **Italicized** brands exceed the grain moisture limit for this test. **GC** = grower comparison product, **ns** = not significantly different
