Test Comments: This site received a very cold 4+ inches of rain immediately upon planting. The combination of rain and soil pathogens reduced some hybrid stands or stunted corn in some plots. The persistent rains prevented conventional herbicide application. Glyphosate was applied to control 12" tall weeds, killing non-GMO corn. Corn ears had good kernel set, kernel depth and large flex ears. Stalk rot was high.

† See last page for footnote information. Dark colored row identifies the check product found in early- and full-season tests. **Bold** yields are significantly above test average. **Italicized** brands exceed the grain moisture limit for this test. **GC** = grower comparison product, **ns** = not significantly different
