Test Comments: Al said that in late May, the trial field received 8 inches of rain in 5 days for a month total of 15.89 inches. June added another 12.34 inches of rain. Seedling stress was tremendous, from which the crop never rebounded. Things turned dry in July and August, only 1 rain (2.22") fell on July 1st. Ears in this 2nd year corn on corn site varied from 3-7" length with little girth. Most grain was small in size.

† See last page for footnote information. Dark colored row identifies the check product found in early- and full-season tests. **Bold** yields are significantly above test average. **Italicized** brands exceed the grain moisture limit for this test. **GC** = grower comparison product, **ns** = not significantly different
