Test Comments: *This is another late planted site in ILWC, due to the excessive rains in May (16"). For the most part, it emerged nearly perfect and yielded great! Overall, kernel set, ear tips & kernel depth was very good. For this region, it represents a good percentage of later planted farms. Still today, much corn in the area still awaits harvest. Standability was very good, with minimal lodging due to stalk rot.*

† See last page for footnote information. Dark colored row identifies the check product found in early- and full-season tests. **Bold** yields are significantly above test average. **Italicized** brands exceed the grain moisture limit for this test. **GC** = grower comparison product, **ns** = not significantly different
