**Test Comments:** Seedlings in this test emerged very well and looked good early. A late June dry spell extended into early July causing some stress here. Fortunately, some late July rains relieved the stress, boosting yields. At harvest, corn was standing well and had good ear placement on the stalk. A light amount of gray leaf spot was observed. Excellent weed control helped deliver good yields also.

† See last page for footnote information. Dark colored row identifies the check product found in early- and full-season tests. **Bold** yields are significantly above test average. **Italicized** brands exceed the grain moisture limit for this test. **GC** = grower comparison product, **ns** = not significantly different
