Test Comments: *This is the only corn test site that I managed this year that looked tremendous from planting through harvest. Ample soil moisture through June, but not as excessive as other areas of MN. The warm July and August conditions really pushed the crop to maturity. Moisture at pollination and seed fill, coupled with a very late frost allowed the crop to reach maturity with excellent quality.*

Dark colored row identifies the check product found in early- and full-season tests. **Bold** yields are significantly above test average. **Italicized** brands exceed the grain moisture limit for this test. **GC** = grower comparison product, **ns** = not significantly different
