Test Comments: *This year worked out to deliver rain when needed and some moderate storms at harvest to test stalk quality. The only dry spell of the summer came in early-mid July for about two weeks but corn seemed to hold up through that period. A late season storm a day before harvest caused some stalk lodging, most were broken at ear level, causing minimal harvest yield reduction. Test rating is 7 out of 10.*

† See last page for footnote information. Dark colored row identifies the check product found in early- and full-season tests. **Bold** yields are significantly above test average. **Italicized** brands exceed the grain moisture limit for this test. **GC** = grower comparison product, **ns** = not significantly different
