Test Comments: *This location was never planted due to persistent spring rainfall. The soil never dried enough to facilitate planting. The calendar rolled around to June 10th, and Jeff had not put any corn in the ground. It was decided to abandon the test, fearing the crop would not reach maturity due to the short growing season this far North. Considering the cool mid-summer temperatures we had, it was the right call.*

† See last page for footnote information. Dark colored row identifies the check product found in early- and full-season tests. **Bold** yields are significantly above test average. **Italicized** brands exceed the grain moisture limit for this test. **GC** = grower comparison product, **ns** = not significantly different
