TEST COMMENTS: Cold and wet weather through much of May brought 6" for the month and did not allow for soybean planting in the area until June. The slow start limited vegetative growth and challenged root systems in wet soils until turning dry once again in August. Some varieties had varying degrees of white mold infection leaving scattered plants with flat pods. Plants heights ranged from 26" to 38".

† See last page for additional information. Results in **bold** are significantly above the test average. **CK** = check and **GC** = grower comparison products, **§** = United Soybean Board entry; **ns** = not significantly different.
