**TEST COMMENTS:** *This location started off great, then rainfall during late July and August was limited. It was surprising to see the yield levels that are present. Plants were relatively short and all were standing perfectly. There was very little evidence of any diseases present at the time of harvest. Dave and Christ said that yield levels in surrounding fields ranged from 55 to 75 bu/acre.*

† See last page for additional information. Results in **bold** are significantly above the test average. **CK** = check and **GC** = grower comparison products, **§** = United Soybean Board entry; **ns** = not significantly different.
