TEST COMMENTS: Plants were all standing perfect at this location, due to that fact that they were relatively short. Rainfall was limited during July and August. There was very little evidence of any disease pressure at harvest. Seed size was average, and internodes were close together. Eric said the surrounding field averaged 57 bu/ac, making this test representative of the area.

† See last page for additional information. Results in **bold** are significantly above the test average. **CK** = check and **GC** = grower comparison products, **§** = United Soybean Board entry; **ns** = not significantly different.
