**TEST COMMENTS:** Soil conditions were extremely wet at planting. Early season rains delayed planting until the end of May. Soybeans struggled to get out of the ground, but seemed to compensate well during the growing season. This location did receive some timely rains that helped produce the yields you see. There was little evidence of any disease pressure at harvest time. Plants ranged from 24-52" tall.

† See last page for additional information. Results in **bold** are significantly above the test average. **CK** = check and **GC** = grower comparison products, **§** = United Soybean Board entry; **ns** = not significantly different.
