**Test Comments:** *These tests were in a perfect location. BJ stated that nearby corn fields suffered from wind damage and kernel damage from strong storms that passed during the growing season. Some hybrids had soft cobs making it difficult to remove kernels without splitting cobs. This crop looked very good, upright stalks with well pollinated ears with kernels filled to the tips. Very little leaf disease was observed.*

† See last page for abbreviation descriptions. Dark colored row identifies the check product found in early- and full-season tests. **Bold** yields are significantly above test average by LSD(0.10). **Italicized** brands exceed the grain moisture limit for this test. **ns** = column values not significantly different
