**Test Comments:** Great germination and final stands at this site. Below average temperatures from May 11-19 that slowed seedling growth. June was very wet, 18+" of rain; May-Aug was 14.5" over the 30-yr average. Fortunately, the test area drains very well, experiencing no ponding. No disease or insect issues noted in late-July. Below average temps June through July and early Sept, slowed crop development.

† See last page for abbreviation descriptions. Dark colored row identifies the check product found in early- and full-season tests. **Bold** yields are significantly above test average by LSD(0.10). **Italicized** brands exceed the grain moisture limit for this test. **ns** = column values not significantly different
