Test Comments: *When the Slater area received rain this summer, it got a large amount at one time. The soil remained saturated for much of June, never really drying out until July when rainfall was nearly 2" below normal. Despite having good overall yield, having wet feet reduced the yield potential of this corn crop. Ears were small with short to average depth kernels. No weed pressure or diseases noted.*

† See last page for abbreviation descriptions. Dark colored row identifies the check product found in early- and full-season tests. **Bold** yields are significantly above test average by LSD(0.10). **Italicized** brands exceed the grain moisture limit for this test. **ns** = column values not significantly different
