Test Comments: Kent noted that an August 18 wind storm caused some greensnap in his corn fields. Lodging scores reflect a minimal amount of greensnap in the trials along with mostly stalk lodging. Leaf disease pressures were moderately high. Gray leaf spot was still noticeable at harvest. Seeding rates were raised slightly this year. Most hybrids responded quite well, but there was abundant rainfall.

† See last page for abbreviation descriptions. Dark colored row identifies the check product found in early- and full-season tests. **Bold** yields are significantly above test average by LSD(0.10). **Italicized** brands exceed the grain moisture limit for this test. **ns** = column values not significantly different
