**Test Comments:** Due to the spring conditions, these trials were planted 2.5 weeks after the surrounding field. The crop got off to a nice start, emerging in 3 days. In June, this crop looked like a record breaker. A dry spell in July came at the wrong time and removed some top-end yield. Disease was very light, the most noted was leaf blight. Lost 1 full-season test rep to remove soil texture change related yield variation.

† See last page for abbreviation descriptions. Dark colored row identifies the check product found in early- and full-season tests. **Bold** yields are significantly above test average by LSD(0.10). **Italicized** brands exceed the grain moisture limit for this test. **ns** = column values not significantly different
