**Test Comments:** Results rejected due to wide yield swings across replications due to weed control issues. This area had it's fair share of moisture this season. There were pockets at this site where yellow nutsedge came in mid-season and hurt corn stand and yield. Harvest in the area has been a struggle this fall due to wet weather and slow grain drying conditions. There remains a lot of harvest to complete.

† See last page for abbreviation descriptions. Dark colored row identifies the check product found in early- and full-season tests. **Bold** yields are significantly above test average by LSD(0.10). **Italicized** brands exceed the grain moisture limit for this test. **ns** = column values not significantly different
