Test Comments: A field visit on July 24 at crop stage V10 found feeding from deer with some plants clipped down past the tassel.

There was some side wall compaction from sidedress. The lack of heat units and an early frost resulted in high grain moistures and a lighter test weight.

† See last page for abbreviation descriptions. Dark colored row identifies the check product found in early- and full-season tests. **Bold** yields are significantly above test average by LSD (0.10). **Italicized** brands exceed the grain moisture limit for this test. **ns** = column values not significantly different
