Test Comments: *A wet spring delayed field work here. Early season growth was slowed by below normal temps and wet soils through June. Yields finished quite well, but saturated soils increased variability. The full-season test was located downslope from the early-season test and these more saturated soils lowered yields in that test. Heat units were below normal, and a Sept 13 frost limited full-season hybrid yield.*

† See last page for abbreviation descriptions. Dark colored row identifies the check product found in early- and full-season tests. **Bold** yields are significantly above test average by LSD(0.10). **Italicized** brands exceed the grain moisture limit for this test. **ns** = column values not significantly different
