Test Comments: This site received a lot of rain in June, and a hail event that severely damaged soybean fields. However, these tests recovered quite well. There was a 6% slope to this site which really helped with drainage this year. The Early-Season test was located on the downward portion of the slope with the Full-Season test located uphill from it. Yields were higher on the higher slope.

† See last page for abbreviation descriptions. Dark colored row identifies the check product found in early- and full-season tests. **Bold** yields are significantly above test average by LSD(0.10). **Italicized** brands exceed the grain moisture limit for this test. **ns** = column values not significantly different
