Yield & Income Factors: Base Moisture = 15.0% Shrink = 1.3 Drying = \$0.025 Price = $\frac{\$3.10}{\$3.10}$ Local GMO non-GMO

Test Comments: This is a tale of two tests: The Early-Season test was located on higher ground than the Full-Season test. The yield difference between tests is attributed to saturated soil from excessive rains through June. These yield differences mirror what farmers have seen across Minnesota this year. The best yields are on soils with higher elevations, while the lowest yields are in the lowest elevations.

† See last page for abbreviation descriptions. Dark colored row identifies the check product found in early- and full-season tests. **Bold** yields are significantly above test average by LSD(0.10). **Italicized** brands exceed the grain moisture limit for this test. **ns** = column values not significantly different
