Yield & Income Factors: Base Moisture = 15.0% Shrink = 1.3 Drying = \$0.025 Price = $\frac{\$3.10}{\$3.10}$ Local GMO / non-GMO

Test Comments: *This was a very wet spring, that delayed planting, and this site was one of the few dry spots of all the Krcil's fields. Despite having pattern tile drainage, the tests had areas with severe issues of stunting and slow growth from excess water (1 early test rep removed). These tests mirror the Krcil's yield experiences. As Mark told me, "yields are from zero to 210 bu/acre" across their fields.*

† See last page for abbreviation descriptions. Dark colored row identifies the check product found in early- and full-season tests. **Bold** yields are significantly above test average by LSD(0.10). **Italicized** brands exceed the grain moisture limit for this test. **ns** = column values not significantly different
