**Test Comments:** *Seeds germinated well at this location, then everything went downhill. Limited rainfall around pollination hurt early season hybrids. Don commented that areas around the test yielded anywhere from 100-230 bu/a. In a year of excessive rainfall, these drought stressed test results maybe very useful, despite having variable yields. I would use caution using only this data to make decisions.*

† See last page for abbreviation descriptions. Dark colored row identifies the check product found in early- and full-season tests. **Bold** yields are significantly above test average by LSD(0.10). **Italicized** brands exceed the grain moisture limit for this test. **ns** = column values not significantly different

**Test Comments:** *Seeds germinated well at this location, then everything went downhill. Limited rainfall around pollination hurt early season hybrids. Don commented that areas around the test yielded anywhere from 100-230 bu/a. In a year of excessive rainfall, these drought stressed test results maybe very useful, despite having variable yields. I would use caution using only this data to make decisions.*

† See last page for abbreviation descriptions. Dark colored row identifies the check product found in early- and full-season tests. **Bold** yields are significantly above test average by LSD(0.10). **Italicized** brands exceed the grain moisture limit for this test. **ns** = column values not significantly different
