**Test Comments:** *Planting no-till into corn residue and my last corn grain test planted on June 2, expectations were not looking good for 200 bu./acre. Populations did turn out excellent and 204 bushel average for the test was reached. Rainfall was above average for most of the summer, but Geoff noted that a lot of the big showers were missed. Gray leaf spot and anthracnose were present, but did little damage.*

† See last page for abbreviation descriptions. Dark colored row identifies the check product found in early- and full-season tests. **Bold** yields are significantly above test average by LSD (0.10). **Italicized** brands exceed the grain moisture limit for this test. **ns** = column values not significantly different
