Test Comments: This test site was off to a great start with good emergence and uniform stands near the V4 growth stage. Ample rain was received in June, but Will Hutters commented that it did not rain for 6 weeks in July and August. He had to irrigate 6 different times. Stalk quality was very good at harvest, and most hybrids stood really well. Anthracnose was present on some of the upper parts of the plants.

† See last page for abbreviation descriptions. Dark colored row identifies the check product found in early- and full-season tests. **Bold** yields are significantly above test average by LSD(0.10). **Italicized** brands exceed the grain moisture limit for this test. **ns** = column values not significantly different
