Test Comments: *Ideal weather after planting delivered excellent plant establishment. Rainfall during the season was well spread out to provide moisture when needed. Conditions for pollination in July were excellent and plants appeared healthy. Common rust and northern corn leaf blight were observed in the plots. Overall, cooler than average temps prevailed for much of June and again during the last half of August.*

† See last page for abbreviation descriptions. Dark colored row identifies the check product found in early- and full-season tests. **Bold** yields are significantly above test average by LSD (0.10). **Italicized** brands exceed the grain moisture limit for this test. **ns** = column values not significantly different
