Test Comments: This site had excessive rainfall late May through June. Hybrids on the high ground yielded over 200 bu/acre, but the same hybrid in lower areas only yielded 100-150 bu/acre, especially in full-season test which was rejected. Stalk rot pressure was moderate. Strong wind during harvest lodged some hybrids after a neighboring hybrid was harvested. Plant height ranged from 5 to 10 feet.

† See last page for abbreviation descriptions. Dark colored row identifies the check product found in early- and full-season tests. **Bold** yields are significantly above test average by LSD(0.10). **Italicized** brands exceeded the grain moisture limit for this test. **ns** = column values not significantly different
