**Test Comments:** Jerry said that early season T-Storm winds (60+mph late June-early July) caused green snap, about 30% in some hybrids, resulting in yield reductions. The tests had a handful of hybrids that green snapped. Overall, plants stood strong and tall, 10-12 feet. Leaf diseases (gray leaf spot & Northern leaf blight) were mildly present. Again, many hybrids exhibited excellent leaf health at this site.

† See last page for abbreviation descriptions. Dark colored row identifies the check product found in early- and full-season tests. **Bold** yields are significantly above test average by LSD(0.10). **Italicized** brands exceeded the grain moisture limit for this test. **ns** = column values not significantly different
