**Test Comments:** *Planting conditions were excellent and emergence was even better. Rainfall started shortly after the corn emerged and did not quit for most of the growing season. Soils were saturated at several times, but not enough to damage the corn. Stalks were starting to get weak and leaf diseases were numerous. Yield levels were higher than expected for the amount of moisture this location received.*

† See last page for abbreviation descriptions. Dark colored row identifies the check product found in early- and full-season tests. **Bold** yields are significantly above test average by LSD(0.10). **Italicized** brands exceed the grain moisture limit for this test. **ns** = column values not significantly different
