we had spme Base Moisture = 15.0% Shrink = 1.3 Drying = \$0.045 Prices: GMO = \$3.50; non-GMO = \$3.50

Test Comments: *The corn stalks were eight to ten feet tall at harvest, some of the tallest plants I've seen this year. The early-season test had many plots with ears lying on the ground which increased yield variability in the results. The full-season test had less ear drop resulting in better and more consistent yields. Area farmers have been happy with corn yields this year.*

† See last page for abbreviation descriptions. Dark colored row identifies the check product found in early- and full-season tests. **Bold** yields are significantly above test average by LSD(0.10). **Italicized** brands exceed the grain moisture limit for this test. **ns** = column values not significantly different
