**TEST COMMENTS:** *The soybean plant height ranged from 20 to 37 inches tall. Early season stress was evident at this sandy site. Plant internodes were short halfway up the plant. In addition, lower pods on plants contained only 1-2 beans with some pods being empty. Despite this stress, yield turned out great.*

† See last page for abbreviation descriptions. Results in **bold** are significantly above test average by LSD (0.10). ns = column values not significantly different.
