TEST COMMENTS: *The extreme rain in June and July caused standing water and/or ponding in the test area that did not recede for a week. Plant heights ranged from 14 to 28 inches. Node spacing was close at 2 inches or less. Pods on the lower plant portion contained one or two beans and a few pods were empty. Strip yields varied from 0 to 86 bpa (due to ponding). These unreliable test results are rejected.*

† See last page for abbreviation descriptions. Results in **bold** are significantly above test average by LSD (0.10). **ns** = column values not significantly different.
