TEST COMMENTS: *When we visited the site in June, the test looked great. There were a few weeds in the surrounding field but not the test. Greg indicated that rainfall was ample this summer. This moisture allowed late season kochia emergence in much of the test. At harvest, it was clear that weed competition reduced soybean pod set and seeds/pod vs. weed-free areas. The decision was made to abandon the test.*

† See last page for abbreviation descriptions. Results in **bold** are significantly above test average by LSD (0.10). **ns** = column values not significantly different.
