TEST COMMENTS: Beans at this location started off great, but did not get much vegetative growth in height. Plants all had stacked internodes, with good pod set on most varieties. Seed sizes were above average. The small stems in conjunction with the short beans made harvest easy. There was little evidence of any disease present at the time of harvest. Overall it was a nice uniform area that yielded well.

† See last page for abbreviation descriptions. Results in **bold** are significantly above test average by LSD (0.10). ns = column values not significantly different.
