Test Comments: Yield tells the story! Ken thought some of the nitrogen may have leached away with the heavy rains throughout the growing season, but with these yields, the corn seemed to have plenty. Lodging rating were mostly root lodging caused by plants being extremely top heavy and a late-season storm but yield loss was minimal. Overall rating of the plot is a 10 out of 10. (10=Best)

† See last page for abbreviation descriptions. Dark colored row identifies the check product found in early- and full-season tests. **Bold** yields are significantly above test average by LSD(0.10). **Italicized** brands exceed the grain moisture limit for this test. **ns** = column values not significantly different
