Test Comments: *Kent commented that the wet weather produced an abundance of disease that rotted corn roots, which in turn forced plants to cannibalize stalks. Poor corn standability, a major area issue, was the result of disease, not storms. Test yields, suffered from excess rain, were similar to area yields. Lodging severity required one direction harvesting. Plant height was 8-10'. Grain size was small to medium.*

† See last page for abbreviation descriptions. Dark colored row identifies the check product found in early- and full-season tests. **Bold** yields are significantly above test average by LSD(0.10). **Italicized** brands exceed the grain moisture limit for this test. **ns** = column values not significantly different
