Test Comments: This location was planted late May, because of persistent early spring rains. The plot was in good shape at harvest.

Corn plants stood well with good stalk strength. Yields were not record setting but hybrids had good moisture and yield variation. This area missed some of the late July and early August rain the rest of Indiana got. The corn around the plot produced nearly 170 bpa at 18% moisture.

† See last page for abbreviation descriptions. Dark colored row identifies the check product found in early- and full-season tests. **Bold** yields are significantly above test average by LSD(0.10). **Italicized** brands exceed the grain moisture limit for this test. **ns** = column values not significantly different
