Test Comments: *This corn crop got off to a good start. Warm and wet soil conditions allowed for good emergence and early growth.*

Rainfall was timely and adequate this summer. High temperatures were above average for much of July and August, but corn seemed to have low stress. Gray leaf spot was evident but caused minimal issues. Lodging ratings were mostly for broken tops, very few broken stalks.

† See last page for abbreviation descriptions. Dark colored row identifies the check product found in early- and full-season tests. **Bold** yields are significantly above test average by LSD(0.10). **Italicized** brands exceed the grain moisture limit for this test. **ns** = column values not significantly different
